

EMISSIONS COMPENSATION

"Opportunities are like sunrises. Wait to long and you miss them."

Joan Lunden

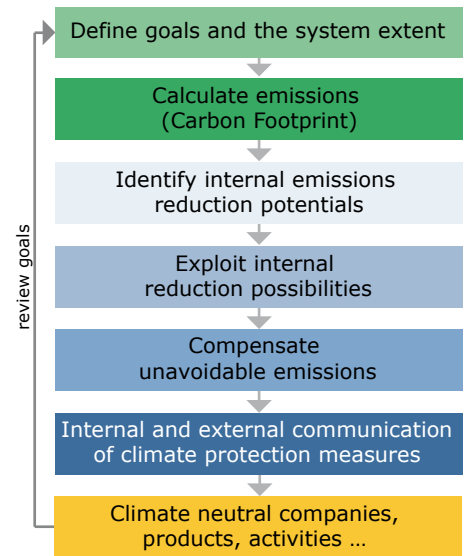

The best way to protect the climate is to avoid greenhouse gas emissions altogether. Unfortunately, this is not always possible or financially viable.

Since these greenhouse gases do their harm globally, they can be offset by carbon projects elsewhere. Emitters can buy certificates from those projects to compensate their own calculated emissions.

To this end emissions certificates can be bought and then surrendered, making individual products or services, business activities or even whole companies climate neutral.

FutureCamp supports you in the development and implementation of your compensation strategy.

The path to climate neutrality by emissions compensation

FutureCamp – an experienced partner

FutureCamp has been active in the German market since 2001 and is among the first service providers committed to carbon footprinting and offsetting. We would be happy to support you in these new tasks with our extensive experience and professional expertise.

We support you to select the suitable climate protection project.

Your benefits

- Building new customer potential
- Creating new customer retention instruments
- Associating your company, trademark or product with your commitment to climate protection measures
- Competitive advantage
- Positive communication with stakeholders

Our services

Developing individual compensation strategies

- Compiling an inventory (carbon footprinting)
- Identifying the internal emissions reduction potentials and exploitation possibilities
- Integration of measure(s) in a compensation strategy
- Benchmarking

Support in compensation and marketing strategy

- Determination of individual criteria for project selection
- Research and selection of suitable emissions reduction projects (e.g. Gold Standard, CDM, VCS)
- Procuring the requisite amount of emissions credits (certificates)
- Monitoring emissions on a regular basis and surrendering the required number of certificates
- Communicating your measures publicly
